

Caregiver Emergency Quick-Reference Card

Fill this out once, in a calm moment, and keep it on the fridge or in your bag. The goal: whether it's you or someone stepping in for you, the numbers and answers you'd otherwise have to remember under pressure are already written down.

Key contacts

Who	Name / Number
Emergency (911) / nearest ER	
Poison Control	1-800-222-1222
Primary doctor	
Pharmacy (+ phone)	
Insurance (plan + member ID)	
Person to call first if you can't be reached	

Current medications

Medication	Dose	When	Notes / Allergies

When to call 911 vs. the doctor vs. wait it out

Confusion, trouble waking, or a fall with a head injury → call 911
Chest pain, trouble breathing, or blue lips/face → call 911
A fever over 103°F, or any fever in someone on chemo/immunosuppressants → call the doctor now

Wound that won't stop bleeding, or a deep cut → ER

A missed dose of a critical medication (insulin, seizure, heart meds) → call the pharmacy/doctor, don't guess

Anything that feels wrong but doesn't fit the list above → when in doubt, call the doctor's after-hours line first

IF YOU'RE MANAGING MORE THAN ONE PERSON'S CARE

This card covers one person for a real emergency. If you're coordinating ongoing care for multiple people at once — appointments, meds, and a handoff plan for whoever steps in — the **Multi-Care Coordinator Planner** and the **Caregiver Handoff Kit** are built for exactly that. Both from Side Lane Co: sidelaneco.etsy.com
